

MetricSpot SEO API

INTRODUCTION

The purpose of this document is to serve as a guide to the available services in the MetricSpot SEO API. These services are the same used by the MetricSpot application in order to generate Web and PDF reports.

The current version of the SEO API is 2.0. The 1.0 SEO API is still in service, but with no support and updates.

CALLS AND AUTHENTICATION

All services are called using the PUT method.

It is necessary to pass the “url” and “apikey” parameters in each call. The parameters have to be sent in JSON format, inside the BODY (Request Payload) of the call.

```
{  
  "url": "metricspot.com",  
  "apikey": "50feb7ffddd113ed680af020"  
}
```

The “apikey” parameter is a 24-character hexadecimal number and corresponds to your MetricSpot user ID.

The “url” parameter corresponds to the URL that is to be analyzed. It can be sent with or without the HTTP/HTTPS prefix. The following URLs are valid “url” parameter values:

```
mailchimp.com  
metricspot.com  
https://metricspot.com  
https://yoast.com
```

CROSS-SITE SCRIPTING

All of the services detailed here allow Cross-Origin Resource Sharing (CORS) since the "Access-Control-Allow-Origin: *" HEADER is present. This allows calls to be delegated to the client via AJAX. Calls can also be done from your server.

LIMITS AND PRICING

MetricSpot's SEO API has a 100 calls courtesy limit per user.

The Pro account allows you to do 30.000 monthly calls to the API. Once this limit is exceeded, you will be invoiced an additional monthly fee and the limit will be increased by an extra 30.000 calls, and son on in 30.000 calls lots.

There is no daily limit in the number of calls, although measures could be taken to avoid server overload if the rate of calls per minute could compromise the stability of the API.

On-Page Analysis

Endpoint:

```
[PUT] https://metricspot.com/api/v2/audit
```

Response example:

```
{
  "code": 200,
  "data": {
    "url": "https://metricspot.com",
    "checktime": 1420750191,
    "code": 200,

]  
}  
}
```

Robots.txt

Endpoint:

```
[PUT] https://metricspot.com/api/v2/robots
```

Response example:

```
{
  "code": 200,
  "data": {
    "url": "https://metricspot.com",
    "checktime": 1420752593,
    "code": 200,
    "website": "metricspot.com",
    "robots": true
  }
}
```

The “robots” parameter will be *true* if a robots.txt file is detected.

Sitemap.xml

Endpoint:

```
[PUT] https://metricspot.com/api/v2/sitemap
```

Response example:

```
{
  "code": 200,
  "data": {
    "url": "https://metricspot.com",
    "checktime": 1420752593,
    "code": 200,
    "website": "metricspot.com",
    "sitemap": true
  }
}
```

The “sitemap” parameter will be *true* if a sitemap.xml file or a Sitemap Index is detected.

WWW Redirection

Endpoint:

```
[PUT] https://metricspot.com/api/v2/wwwredirect
```

Response example:

```
{
  "code": 200,
  "data": {
    "url": "https://metricspot.com",
    "checktime": 1420752593,
    "code": 200,
    "website": "metricspot.com",
    "wwwredirect": true
  }
}
```

The “wwwredirect” parameter will be *true* the Website with and without WWW redirect to the same URL and the content displayed is the same.

WordPress Optimization

Endpoint:

```
[PUT] https://metricspot.com/api/v2/wordpress
```

Response Example:

```
{
  "code": 200,
  "data": {
    "url": "https://yoast.com/",
    "checktime": 1420751973,
    "code": 200,
    "website": "yoast.com",
    "wordpress": {
      "version": "4.1",
      "yoast": "1.7.1",
      "noscripts": false,
      "nofolders": false,
      "securelogin": true,
      "noadmin": true,
      "latestwordpress": "4.1",
      "latestyoast": "1.7.1"
    }
  }
}
```

Mobile Optimization

Endpoint:

```
[PUT] https://metricspot.com/api/v2/mobile
```

Response Example:

```
{
  "code": 200,
  "data": {
    "url": "https://yoast.com/",
    "checktime": 1420752070,
    "code": 200,
    "website": "yoast.com",
    "mobile": {
      "css": true,
      "viewport": true,
      "appleicon": true,
      "noflash": true,
      "noredirect": true,
      "responsive": true
    }
  }
}
```

W3C Validation

Endpoint:

```
[PUT] https://metricspot.com/api/v2/w3c
```

Response Example:

```
{
  "code": 200,
  "data": {
    "url": "https://yoast.com/",
    "checktime": 1420752177,
    "code": 301,
    "website": "yoast.com",
    "w3c": 2
  }
}
```

If there are validation errors, the “w3c” parameter will return the number of errors. In case there are no errors, the “w3c” parameter will be *true*.

Custom 404 Error Page

Endpoint:

```
[PUT] https://metricspot.com/api/v2/custom404
```

Response Example:

```
{
  "code": 200,
  "data": {
    "url": "https://metricspot.com",
    "checktime": 1420752434,
    "code": 200,
    "website": "metricspot.com",
    "custom404": true
  }
}
```

The “custom404” parameter will be true if a customized 404 Error Page is found.

Favicon

Endpoint:

```
[PUT] https://metricspot.com/api/v2/favicon
```

Response Example:

```
{
  "code": 200,
  "data": {
    "url": "https://metricspot.com",
    "checktime": 1420753349,
    "code": 200,
    "website": "metricspot.com",
    "favicon": "https://metricspot.com/favicon.ico"
  }
}
```

If the Favicon exists, the “favicon” will be a *string* with its URL or *false* if it doesn't exist.

Conversion Form

Endpoint:

```
[PUT] https://metricspot.com/api/v2/convform
```

Response Example:

```
{
  "code": 200,
  "data": {
    "url": "https://metricspot.com",
    "checktime": 1420753503,
    "code": 200,
    "website": "metricspot.com",
    "convform": true
  }
}
```

This service should be called only if a conversion form is not detected by the On-Page Analysis call.

If the Website has a conversion form in its home page or contact page, the “convform” parameter will be *true*.

Google Analytics

Endpoint:

```
[PUT] https://metricspot.com/api/v2/analytics
```

Response Example:

```
{
  "code": 200,
  "data": {
    "url": "https://metricspot.com",
    "checktime": 1420753632,
    "code": 200,
    "website": "metricspot.com",
    "analytics": true
  }
}
```

This service should be called only if Google Analytics is not detected by the On-Page Analysis call.

The “analytics” parameter will be true if the Google Analytics Tracking Code is found in the home page’s HTML or any of the loaded Scripts.

Social Influence of the Website

Endpoint:

```
[PUT] https://metricspot.com/api/v2/social
```

Response Example:

```
{
  "code": 200,
  "data": {
    "url": "https://metricspot.com",
    "checktime": 1420751838,
    "code": 200,
    "website": "metricspot.com",
    "social": {
      "fblikes": 131,
      "fbshares": 169,
      "fbcomments": 25,
      "twbacklinks": 318,
      "gplusones": 453,
      "linkedin": 46,
      "stumbleupon": 8,
      "pinterest": 0
    }
  }
}
```

Facebook Account Data

Endpoint:

```
[PUT] https://metricspot.com/api/v2/facebook
```

Response Example:

```
{
  "code": 200,
  "data": {
    "url": "https://metricspot.com",
    "checktime": 1420753927,
    "code": 200,
    "website": "metricspot.com",
    "facebook": {
      "name": "metricspot",
      "image": "https://metricspot.com/img/uploads/metricspot.png",
      "title": "MetricSpot",
      "website": "metricspot.com",
      "about": "Creamos herramientas para SEO, Social Media y Web Performance",
      "friends": 2367,
      "talking": 4
    }
  }
}
```

This service detects the Facebook accounts that are linked from the Website and extracts the data from Facebook Open Graph.

Twitter Account Data

Endpoint:

```
[PUT] https://metricspot.com/api/v2/twitter
```

Response Example:

```
{
  "code": 200,
  "data": {
    "url": "https://metricspot.com",
    "checktime": 1420754105,
    "code": 200,
    "website": "metricspot.com",
    "twitter": {
      "user": "MetricSpot",
      "title": "MetricSpot",
      "bio": "Creamos herramientas para SEO, Social Media y Web Performance",
      "followers": 668,
      "website": "metricspot.com",
      "location": "Madrid - Barcelona",
      "tweets": 346,
      "image":
        "http://pbs.twimg.com/profile_images/473059857684123648/h_ewXWZ1_normal.png"
    }
  }
}
```

This service detects the Twitter accounts that are linked from the Website and extracts the data from the Twitter API.
